1

Pour powder 360° around catheter.

Ensure powder completely surrounds the site.

2

Hold pressure for a minimum of 2 minutes.

No peeking! Time it! **Extend pressure times as clinically necessary.**

3

Place transparent dressing.

Leave powder in place until the scheduled dressing change.

360°

2 MINUTES

7 DAYS

ⓘ Consult Instructions for Use for complete Warnings and Cautions.

Seal the Site. STAT.

STATSEAL POWDER & STATSEAL ADVANCED POWDER

Powder Removal Guidelines Without PCD

The following powder removal guidelines are based on compilation of best practices and can be adapted to your specific application or facility protocol.

1

Remove transparent dressing.

After dressing removal, use dry, sterile gauze to gently brush away any loose StatSeal particles.

2

Clean around site.
Do not disrupt seal.

Seal should remain when cleaning. Part of seal may come off when cleaning; do not scrub to remove.

3

Apply new transparent dressing.

Reapplication of powder is **ONLY** needed if seal has been disrupted and bleeding or oozing occurs.

Loose StatSeal remains after dressing removal
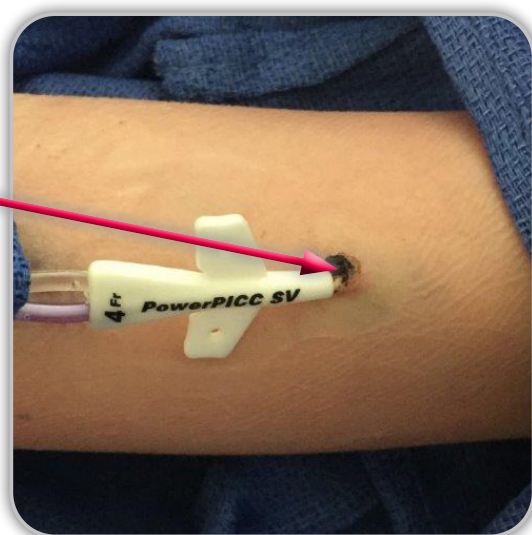

SEAL

Seal remains at insertion site after cleaning

NOTE:

StatSeal has no interaction with CHG. The seal falls off naturally over time with subsequent dressing changes. For catheter removal, moisten dry seal with sterile water/saline to loosen seal.
